

Community Garden Planning Notes

These are fictional notes created to demonstrate DocuMind.

The neighborhood team plans to open a small community garden in May. The first phase will include twelve raised beds, a shared tool shed, and a rainwater collection tank. Residents can sign up for a bed or join the volunteer team.

The project budget is USD 2,400. Wood and soil will cost USD 1,200, tools and storage will cost USD 700, and the water tank will cost USD 500. Volunteers will help assemble the beds and prepare the ground on two Saturday mornings in April.

The team has three tasks before opening day: confirm the site with the community center, collect volunteer sign-ups, and order materials by April 10. The first planting day is planned for May 3.

Safety and accessibility matter. Paths will be wide enough for wheelchairs, tools will be stored securely, and volunteers will label plants and keep the shared area tidy. During summer, two volunteers will check watering each week.

The main risks are late material deliveries and a shortage of volunteers. The team will order supplies early and ask nearby schools and local clubs for help if more volunteers are needed.
